Academy

Digital Technologies Workshop

Melbourne, February 27th-28th

Who is running this?

The Australian Computing Academy (ACA) is a Commonwealth funded project developing resources that will be freely available to students and teachers across Australia to learn about programming and related concepts in Digital Technologies.

Who Should Attend?

- Primary and secondary teachers looking to improve their understanding of the Digital Technologies curriculum
- Teachers and technology leaders seeking resources to support the implementation of the curriculum

What will the workshop include?

- Case studies showcasing existing practice, and school-wide scope & sequence, incorporating ACA resources
- Hands on experiences with free, classroom-ready resources that target the Digital Technologies curriculum
- Introduction to various programming tools available, including visual and text-based programming, and object-oriented approaches.
- Deep dive into Blockly and Python programming, covering coding aspects of years 5-6 and 7-8 curriculum, focusing on defining and decomposing real-world problems, designing algorithms and implementing programs.
- 12 month membership DLTV.
